

Hand-Eye Coordination

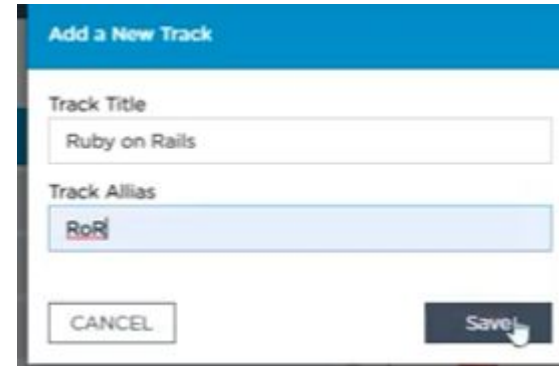

UX DESIGN COURSE

Mistake: When adding and saving you need to move pointer left to right.

A dialog box titled "Edit Track Name" with a blue header. It contains a text input field labeled "New Track Name:" with the text "PHP AND LARAVEL". At the bottom, there are two buttons: "CANCEL" on the left and "Save" on the right. A mouse cursor is pointing at the "CANCEL" button.

A dialog box titled "Add a New Track" with a blue header. It contains two text input fields: "Track Title" with the text "Ruby on Rails" and "Track Alias" with the text "RoR". At the bottom, there are two buttons: "CANCEL" on the left and "Save" on the right. A mouse cursor is pointing at the "Save" button.

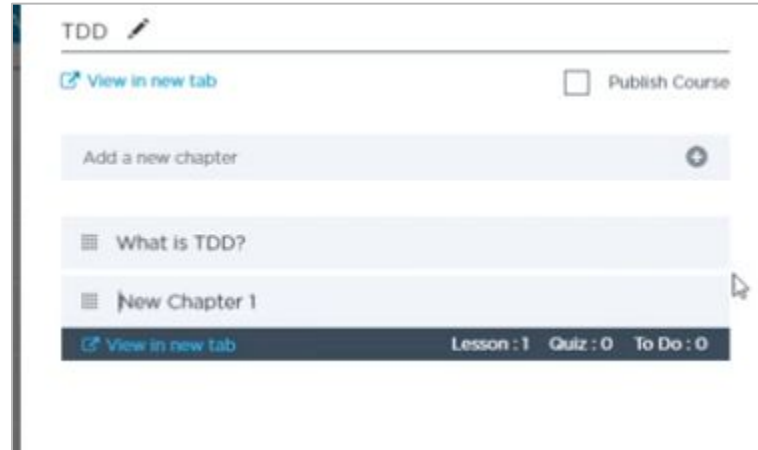

Proposed Solution: Instead of the save button in the right it should be in the left and cancel should be in the right.

Mistake: Hard to locate the delete button and no indication of what kind of button is that.

Proposed Solution: Create a close button or deleted that easily be pointed.

Mistake: It should be able to open directly new tab without over and all details should be seen for less hand and eye movement.

Proposed Solution: Remove hover and make it display all action in the list.
